EcoPima[®]
LUXURY ORGANIC COTTON

Emilcotoni

What is EcoPima®?

“

A fiber? Yes, but not only.

A yarn? Yes, but not only.

A guarantee of sustainability? Yes, but not only.

Before that, EcoPima is an idea, a commitment, a project.

”

At the origin of this project there are three fundamental values, which have always inspired the world of fashion: **raw material quality**, **traceability** and **personalization**.

But the real novelty introduced by Emilcotoni is having been able to combine and enhance each other within **a single project**.

This is how **EcoPima** was born: a fiber, a yarn, a project.

Emilcotoni

DEFINING TRAITS OF THE FIBER

- Micronaire: 3.70 - 3.80 ug/inch
- Fiber length: up to 38 mm
- Level of uniformity: more than 85%
- Cultivation site: USA
- Contamination-free guarantee

Emilcotoni

ORGANIC, PRECIOUS AND SUSTAINABLE

The EcoPima Project was born from the idea of identifying **the best organic cotton fiber** on the market in order to create unique and precious yarns.

Thanks to their parameters, EcoPima fibers are suitable for a wide range of processes and allow the creation of **customized and always new products**.

Emilcotoni

GOTS CERTIFICATION

For EcoPima, Emilcotoni selects **only GOTS certified fibers**.

The first requirement to obtain GOTS is that the product is made of **natural fibers** grown in accordance with the criteria of **organic farming**.

The second requirement is that the product has been manufactured in compliance with stringent **environmental, social and safety criteria** identified by GOTS.

Emilcotoni

QUALITY AND SAFETY, STEP AFTER STEP

All EcoPima items are subjected to **additional voluntary checks** at each step of the supply chain, thus providing a further guarantee about their organicity and quality.

This careful verification process is **entirely traceable** and allows the customer to know exactly what they are buying, from its origin to the delivery of the product.

Emilcotoni

TRACK YOUR YARN

In the EcoPima section of Emilcotoni website, in the "Track your Yarn" page, after registering, the customer can receive the entire chain of the purchased lot.

By entering **the article code** and **the lot number** in a special form, the customer will receive an e-mail with **all the production steps** and the documentation supporting each process.

"Traccia il tuo filato" example

"Traceability Documents" Example

Emilcotoni

SOME TEST EXAMPLES

- **GMO and pesticide analysis on the harvest**
- **HVI analysis on raw cotton**
- **Capacitive Uster Test®**

Every step of the chain takes place in facilities which can guarantee **the highest quality standards** and boast the most authoritative international textile and company certificates.

Emilcotoni

THREE YARNS, 100% EcoPima®

Thanks to this extraordinary raw material, we can propose a yarn in
three different declinations.

The 36-color card that comes with these yarns is designed **to best enhance the fiber** and includes **only sustainable and long-lasting dyes** made in Italy.

EcoPima Soft is a gassed ring-spun yarn, with a delicate and soft hand-feel.

EcoPima HT has a higher twist. Without relinquishing the shiny quality typical of EcoPima fibers, this yarn has a drier, more crisp hand-feel.

An even higher twist characterizes **EcoPima Crêpe**: this is the yarn which has the most *crêpe* hand-feel, perfect for the summer.

Emilcotoni

CHOICE AND EXCLUSIVITY

Our customers have the opportunity to **reserve this rare and precious fiber** and transform it into the products they have imagined.

With EcoPima fibers it is possible to create almost all the yarns in our **collection** or to develop *ad hoc* products that can be 100% customized.

In this way, each customer can be sure to have purchased **the best organic cotton on the market** and to have created a unique and unrepeatable product.

Emilcotoni

RE-KNIT PROJECT

From EcoPima comes **Re-Knit Project**, realized in collaboration with **Shima Seiki Italy**, world leader in the production of flat knitting machines for textile products.

The core of the project is a **new way of** thinking about **recycling**.

Thanks to their resistance, EcoPima yarns can be recycled in a much more conservative way: **by unknitting the garment** in order to create a new one.

Emilcotoni

RE-KNIT PROJECT

Knitted

Re-Knitted

We have developed the **Re-Knit Project** through the creation of **two garments**, using the same yarn.

From an elegant women's garment made of **EcoPima Soft Nm. 4/100.000**, we have created a long-sleeves shirt with the same yarn, recovered from the first garment.

To recap, we have **unknitted** the first dress, **retrieved** the yarn, **reconditioned** it, and made the new garment.

Emilcotoni

In both cases these garments are made entirely without stitching on the machine Shima Seiki MACH2-153XS for the 18 gauge.

Shima Seiki's **WHOLEGARMENT®** technology allows, in fact, to knit in three dimensions, offering considerable advantages in terms of quality and sustainability, in a zero-waste perspective.

KEY CONCEPTS and MARKETING TOOLS

- High quality standards;
- Full traceability of the supply-chain;
- An extraordinary longevity.

All this is what makes EcoPima
the best organic cotton in the world.

THANK YOU

Emilcotoni
